Subject: Microsoft Settlement

The problems identified above with the Proposed Final Judgment can be summarized as follows:

The PFJ doesn't take into account Windows-compatible competing
operating systems

Microsoft increases the Applications Barrier to Entry

by using restrictive license terms and intentional incompatibilities.

Yet the PFJ fails to prohibit this, and

even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

<1i>

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

<|i>

The PFJ allows users to replace Microsoft Java with a competitor's product --

but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

<|i>

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover

Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box -- operating systems that all use the Win32 API and are advertised as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply

by changing the requirements shortly before the deadline, and not informing ISVs.

<1i>

The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware -- but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation -but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

<1i>

The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems

in an uncertain state: are they, or are they not infringing on Microsoft software patents?

This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently
used by Microsoft

Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers

which <i>could</i> run a Microsoft operating system -- even for computers running Linux. (Similar licenses to OEMs were once banned by the

1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities

```
Historically Used by Microsoft
   <111>
   <1i>
   Microsoft has in the past inserted intentional incompatibilities in
   its applications to keep them from running on competing operating
systems.
   The PFJ Fails to Prohibit Anticompetitive Practices Towards
OEMs
   <ul>
   The PFJ allows Microsoft to retaliate against any OEM that ships
Personal
   Computers containing a competing Operating System but no Microsoft
   operating system.
   <1i>
   The PFJ allows Microsoft to discriminate against small OEMs
   -- including regional 'white box' OEMs which are historically the
   willing to install competing operating systems -- who ship competing
   software.
   </a>
   <1i>
   The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs
  based on criteria like sales of Microsoft Office or Pocket PC
systems.
   This allows Microsoft to leverage its monopoly on Intel-compatible
operating
   systems to increase its market share in other areas.
   The PFJ as currently written appears to lack an effective
enforcement mechanism.
   Considering these problems, one must conclude that the Proposed Final
Judgment as written allows and encourages significant anticompetitive
practices to continue, and would delay the emergence of competing
Windows-compatible operating systems. Therefore, the Proposed Final
Judgment is not in the public interest, and should not be adopted without
addressing these issues.
A thorough and thoughtful propisition of remedies for the above issues
has been assembled by Dan Kegel at: <a
